PRODUKTIVITAS USAHATANI DALAM SISTEM PERTANIAN TERPADU: 
STUDI KASUS DI KECAMATAN AMARASI, KABUPATEN KUPANG, NTT 
(INTEGRATED FARMING SYSTEMS PRODUCTIVITY: A Case Study in Amarasi, 
Kupang District, NTT)\(^1\)

Maximilian M. J. Kapa

Abstract

Many farmers in Amarasi operate small-scale mixed crop-livestock farms. In most of 
these farms, productivity of both food crops and livestock production systems is quite 
low. There is, however, a potential to improve the productivity of the farm. Food crop 
production can be enhanced by improving farm practice using available technology 
and provision access to credit facilities, agricultural information and increase roles of 
village institutions. While combining breeding and fattening represents an alternative 
for improving livestock production systems.
